

Nourish, Revitalize, Rejuvenate

100% Pure Oxygen

Skin Care Therapy

Where Oxygen Therapy Originated

As skin care professionals, we believe that oxygen is the most vital element for skin care. Oxygen skin care therapy was developed in the 20th Century by John Gardner, founder and developer of the process. He is a national board certified respiratory therapist and oxygen specialist who has over 35 years of experience in the medical field overseeing oxygen therapy treatments.

Mr Gardner's fascination with skin rejuvenation began while treating burn victims with hyperbaric oxygen and witnessing total skin reparation. Discovering the overwhelming results of oxygen on burn victims, Mr. Gardner turned his interests to the field of cosmetics, where he felt the use of oxygen would provide a tremendous benefit to the general public.

Benefits

At GG Marlene, we are constantly amazed by the many and varied benefits that 100% pure oxygen therapy has on the human body. The system is uniquely designed to cleanse, nourish and revitalize every skin cell through its revolutionary use of pure oxygen gas molecules. This patented system is among the first to offer both corrective and preventative skin care, especially when it comes to reducing the effects of aging caused by the sun, free radical damage and exposure to pollutants.

100% pure oxygen therapy uses 87 different combinations of vitamins, minerals, enzymes, amino acids and most importantly pure oxygen gas, thereby leaving the skin healthy, rejuvenated and beautiful.

Here's how it works:

Exfoliation: This is defined as the removal of dead skin flakes that form daily on the skin surface. It is an essential part of cleansing the facial skin. In addition, this step temporarily reduces the tri-level barrier function of the skin so that it can receive the active ingredients.

Cleansing: Skin cleanser is applied using sterile techniques so as not to irritate the newly exposed surface skin cells and not to kill the resident and helpful bacteria already present on the skin.

Hydration: This functions to supply moisture and nourishment to the skin's surface. The 100% pure oxygen therapy process of "Osmotic hydration" is the only one of a kind to use specially formulated enzymes and mineral solutions to help absorb the moisture into the skin.

Oxygenation: This portion of the treatment is uniquely and exclusively part of the 100% pure oxygen therapy. Oxygen, in conjunction with vitamins and minerals is propelled onto the skin to nourish and revitalize the skin cells. Oxygen is an excellent nutrient for collagen and elastin. The body uses its own oxygen supply and other nutrients to increase the strength of the collagen and elastin fibers. The result is an increase in the suppleness and elasticity of the skin.

Gigi Fisher is the owner of GG.Marlene Spa located at 4600 Military Trail, Suite 109 at the corner of Military Trail and University Blvd specializing in skin care, massage therapy, sugar hair removal and body treatments.
